 (word to the grammar.)

- Z -

- Z01 Ti pa rodja. Icikou tu cutri durzo da
 ti M⁴ pa rodja . icikou tu cutri durzo da
 ti (M⁴ pa [rodja GU]) . icikou (tu [{cutri durzo} {da GU}])
 ti (pa rodja) . icikou (tu [{cutri durzo} da])
 #ti (pa rodja)# #icikou (tu ((cutri durzo) da))# (2 utterances; but)
 [This grew because you watered it.] (with the logical sense of one.)

Z02 Ti pa rodja. Icikou tu cuidru da

ti M⁴ pa rodja . icikou tu cuidru da
 ti (M⁴ pa [rodja GU]) . icikou (tu [cuidru {da GU}])
 ti (pa rodja) . icikou (tu [cuidru da])
 #ti (pa rodja) # #icikou (tu (cuidru da))#
 [This grew because you watered it.]

- Z03 Kuinukou ti pa rodja ki tu cutri durzo da (kuinukou is another)
 kuinukou ti M⁴ pa rodja ki tu cutri durzo da (temporary word.)
 kuinukou (ti [M⁴ pa {rodja GU}]) ki (tu [{cutri durzo} {da GU}])
 kuinukou (ti [pa rodja]) ki (tu [{cutri durzo} da])
 #kuinukou (ti (pa rodja)) ki (tu ((cutri durzo) da))#
 [Therefore this grew, you watered it.]
 (The CPD kinukou won't work because of the phrase 'ki nukou...'.
 nukouki might work despite the possibility of 'nukou ki...' provided
 some distinguishing stress were given the CPD, e.g., /nukoUKi/.)
- Z04 Kuinukou ti pa rodja ki tu cuidru da
 kuinukou ti M⁴ pa rodja ki tu cuidru da
 kuinukou (ti [M⁴ pa {rodja GU}]) ki (tu [cuidru {da GU}])
 kuinukou (ti [pa rodja]) ki (tu [cuidru da])
 #kuinukou (ti (pa rodja)) ki (tu (cuidru da))#
 [Therefore this grew, you watered it.] (An odd word-order in English.)

- Z05 Tu pa cutri durzo ti. Icinukou da rodja
 tu M⁴ pa cutri durzo ti . icinukou da rodja

 #((ra ba)(ra buua)) gou (ko (ba (me (lo bua))) ki (ba buua))#
 [For every something x and every predicate P, if and only if x is a manifestation of P-hood, then x is P.]
 (The privilege is that, unlike guu which it otherwise resembles, gou may have prenex quantifiers involving bua and kin ahead of it. Sometimes these will be CPDed with RA or NI, as in this case; sometimes not. This is the occasion for the M7 lookahead extension. The Pre-parser must search the string for any gou's--sign of the prenex--and then put M7's in front of any BUA's it finds in the prenex. In principle, this lookahead could be pretty long; in practice, since prenexes are likely to be short expressions, the lookahead is probably quite tolerable by human standards. In any case, once marked, M7 BUA behaves like an argument.)
- AA05 Raba rabua gou, ko ba melea bua ki ba bua (M7 again.)

 [Mary, and, incidentally, Pete teaches French to her, loves Pete, who,
 incidentally, teaches French to someone else who is, by the way, a
 beautiful girl also.]
 (The discursive sui doesn't really modify just nirli. This excessive
 locality of attachment is the price we're paying for the Preparser's
 gobbling function: the fact that it indiscriminately gobbles up all
 "grammatically non-essential" elements before handing a string to the
 Parser. This allows the Parser--i.e., the grammar proper--to be very
 elegantly designed to deal with the really difficult problems. In
 a sense the "grammatical noise" has been filtered out of the specimen
 before it is even presented to the Parser for analysis.)

 haitosaiifo (bi [{<lo (me [lae {lie <gai , sulphuric acid , gai>}]) GU}> GA} GU])
 haitosaiifo (bi [lo {me <lae (lie [gai , sulphuric acid , gai])>}])
 #haitosaiifo (bi (lo (me (lae (lie (gai , sulphuric acid , gai))))))#
 [H₂SO₄ is whatever 'sulphuric acid' means in English.]
- EE19 Ta me HaiToSaiOFo

ta me haitosaiifo
 ta ([me haitosaiifo GU] GU)
 ta (me haitosaiifo)
 #ta (me haitosaiifo)#
 [That's sulphuric acid.]

(Obligatory non-pausing inside acronyms, together with obligatory pausing between them, between them and letter-variables, between letter-variables, and between vowel-letter-final acros and any sequel, together with their penultimate stress, should make them resolvable as such. But the whole new morphology needs reinvestigation now, possibly with Yacc. This section on acronyms is a "3rd cut", done in Feb 82, the first cut having been made in Nov 81. But there is much more to be found out about this complex topic.)

- | | | |
|------|--|--|
| FF01 | Loi Mrenu
([loi mrenu])
loi mrenu
loi mrenu
#loi mrenu#
[Hi, Man!] | (Loi turns the following predexp into a)
(vocatively used name: a "Carter-Voc".) |
| FF02 | Loi Ganfua go Redro nu Herfa
([loi ganfua go redro nu herfa])
loi ganfua go redro nu herfa
loi ganfua go redro nu herfa
#loi ganfua go redro nu herfa#
[Hail, Lady with the Red Hair!]

(This featureless parse is the best the gobbler can do with Carter-Vocs at present, 9 Mar 82. Later, the bounded strings found by the Pre-parser to be C-Vocs will be presented to the Parser for parsing as independent specimens. Then the resulting parses will be popped back into the main parse, i.e., the parse produced after the C-Voc was gobbed. When this facility is in place, the TP of ff02 will be:
\$loi (ganfua go (redro (nu herfa)))\$. A similar procedure will be used for parentheses, of which there are, at the moment, no instances in the Corpus. But they, too, will be handed to the Parser as independent specimens, and then their parses reinserted in the parse of the main parse.) | (All preda's in the predexp)
(are to be capitalized.) |
| FF03 | Ei tu vizka loi Ganbra lepo mi pana nu ganble turka letu fothaa
(ei) tu (vizka [{loi ganbra}]) lepo mi M4 pana nu ganble turka letu fothaa
ei (tu [{vizka <loi ganbra>} {<lepo (mi [M4 pana {<(nu ganble) turka> <[letu fothaa] GA] GU}>}]}> GU})]
ei (tu [{vizka <loi ganbra>} {lepo <mi (pana [{<nu ganble> turka} {letu fothaa}]>}]}])
#ei (tu ((vizka (loi ganbra))(lepo (mi (pana (((nu ganble) turka)(letu fothaa))))))#

[Do you see, O Noble One, that I have worked admirably on your castle?] (There could be literary pauses around 'loi Ganbra', but pauses are not obligatory here...at least not yet. But lexemic pause could be used to bound the right-end of a Carter-Voc.) | |
| FF04 | Ei tu pa vizka la Mrenu
(ei) tu M4 pa vizka la mrenu
ei (tu [M4 pa {vizka <([la mrenu] GA) GU}>}])
ei (tu [pa {vizka <la mrenu>}]) | (la replacing le does the same thing)
(for designations: it)
(turns the predexp in-)
(to something that is) |

#ei (tu (pa (vizka (la mrenu))))# (semantically a name.)
 [Did you see (the) Man?]
 (Grammatically, however, no difference is wrought. la is simply part
 of the LE-lexeme.)

- FF05 La Ganfua go Redro nu Herfa ga matma mi
 la ganfua go redro nu herfa ga matma mi
 ([la {ganfua go <redro (nu herfa)>}] ga) (matma [mi GU])
 ([la {ganfua go <redro (nu herfa)>}] ga) (matma mi)
 #([la {ganfua go <redro (nu herfa)>}] ga) (matma mi)#
 [Lady with the Red Hair is my mother.]
 (It seems best to drop the English article in some trats.)
- FF06 La Blabi Garfua pa korji la Redro Garfua lepo gotso la Hatre Sitfa
 la blabi garfua M4 pa korji la redro garfua lepo gotso la hatro sitfa
 ([la {blabi garfua}] GA) (M4 pa [korji {<([la {redro garfua}] GA) (lepo
 [gotso {<(la [hatro sitfa]) GA> GU}]}> GU}])
 (la [blabi garfua]) (pa [korji {<la (redro garfua)> <lepo (gotso [la
 {hatro sitfa}])>}])
 #(la (blabi garfua))(pa (korji ((la (redro garfua))(lepo (gotso (la
 (hatro sitfa))))))#
 [The White Queen told (ordered) the Red Queen to go to the Hot Place.]
- FF07 La Musmu pa djadou la Ratcu lepo de fa dámgoo la Vrici
 la musmu M4 pa djadou la ratcu lepo de M4 fa damgoo la vrici
 ([la musmu] GA) (M4 pa [djadou {<([la ratcu] GA) (lepo [de {M4 fa
 <damgoo ([{la vrici} GA] GU}>}]}> GU}])
 (la musmu) (pa [djadou {<la ratcu> <lepo (de [fa {damgoo <la
 vrici}>})>}])
 #(la musmu)(pa (djadou ((la ratcu)(lepo (de (fa (damgoo (la
 vrici)))))))#
 [Mouse told (informed) Rat that he (Mouse) was going to go down River.]
 (As in a children's story. There are no grammatical problems
 with these forms. But there are, of course, morphological ones
 aplenty. For now, given a C-final breath-group, the 1st 'la'
 that comes along is no longer guaranteed to mark the beginning
 of the name. But I believe there is nothing insurmountable about
 this, nor about the other, morphological problems that will have
 to be solved to install this rather pretty feature in the language.)

```
/* PREPARSE.C
```

Copyright (C) 1982 by The Loglan Institute, Inc.
 Created 11 Feb 82 by JCB and Gyro
 Last change: addition of M11,M12; renamed 'MiscMods()' as 'Gobble()';
 12 Mar 82 by JCB.

This program contains three functions, LexBreakCPD(), LexOfCPD() and PreParse(), all of which are called by the Lexer in PARSE.C. LexBreakCPD() is called first and breaks all CPDs up into their constituent LWs. LexOfCPD() is called next and helps the Lexer convert the specimen into a string of lexemes by either breaking up CPDs or lexing them. Then PreParse() is called to process the string by a) eliminating non-lexemic pauses, b) absorbing LIU quotes, parens & Carter-Vocatives into their head-words, c) absorbing ("gobbling") all but initial free mods into the preceding lexeme, and finally d) inserting M-lexemes in the appropriate places. The three functions are listed in that order.
